

DATASHEET

CYBER RISK MANAGEMENT OPERATIONS SERVICE

Identify and manage relevant cyber risks to enable effective, risk-based decision-making for your business

BENEFITS

- Improve analysis of cyber risks relevant to your organization
- Identify essential program needs for effective cyber risk management
- Advance cyber threat visibility for your organization with integrated threat intelligence
- Align cyber threats relevant to your organization with critical business assets
- Increase effectiveness of cyber risk controls across your organization

Overview

To advance business processes and mature security effectiveness, organizations must move beyond the assumption- and intuition-based decision-making found across most cyber risk management programs. The shift to better informed and risk-based decision making can help align an organization's critical assets with the most relevant, harmful threats.

Mandiant Cyber Risk Management Operations Services helps your organization design solutions, improve capabilities and implement operational capacity to drive real-world risk mitigation practices at scale.

This service helps to build your cyber risk management program from the ground up or enhance the operations of your existing program.

Our methodology

Mandiant experts review documentation and conduct workshops to deeply understand your organization's existing cyber risk management capabilities. They focus on the following domains:

- **Governance.** Understand how cyber risk is articulated and managed across your specific organization and effectively reported.
- **Measurement and performance.** Realize how results-oriented metrics are managed, qualified and quantified for various stakeholders, from tactical operations to the Board of Directors.
- **Technology risk.** Validate the impact of existing and rapidly consumed technology connected to the overall risk profile and risk mitigation practices across your organization.
- **Threat intelligence.** Identify the threats most relevant to your organization and understand how proper context can better inform your cyber risk program.
- **Incident response.** Examine how your existing response capabilities and remediation gaps impact your organization's risk profile.

With these findings, Mandiant experts recommend best practices, improvements and operational support across the security spectrum of your organization.

Our experts propose the addition, modification or removal of cyber risk management processes, policies, stakeholders and technical controls to ultimately advance your organization’s risk management maturity and reduce future risk.

WHY MANDIANT

Mandiant has been at the forefront of cyber security and cyber threat intelligence since 2004. Our incident responders are on the frontlines of the most complex breaches worldwide. We have a deep understanding of both existing and emerging threat actors, as well as their rapidly changing tactics, techniques and procedures.
